CONVERGED SOLUTIONS

Catalyst

Procurement, Audit, analysis and sourcing

Catalyst is one of the UK's largest independent utilities companies. They offer a complete business consultancy service offering bespoke utilities solutions and strategies for the management of commercial electricity and gas requirements. They evaluate business needs and work with their customers to find solutions that meet their immediate and future requirements. They can advise on day-to-day requirements and consider how their clients can maximise efficiency whilst lowering overheads and ongoing costs.

Three Services

We have three core services, each designed to increase value in different ways:

- Energy Procurement
- Invoice Validation
- Account Management

• Energy Procurement

Our energy consultant's work with your purchasing staff to advice on contract type and market conditions. Then we'll build purchasing strategies and action plans that will deliver lower total cost and reduced risk of supply chain failure.

• Invoice Validation

We can then provide monthly invoice validation services and liaise directly with your accounts payable department.

• Account Management

Your Account Manager will become your single point of contact for any queries.

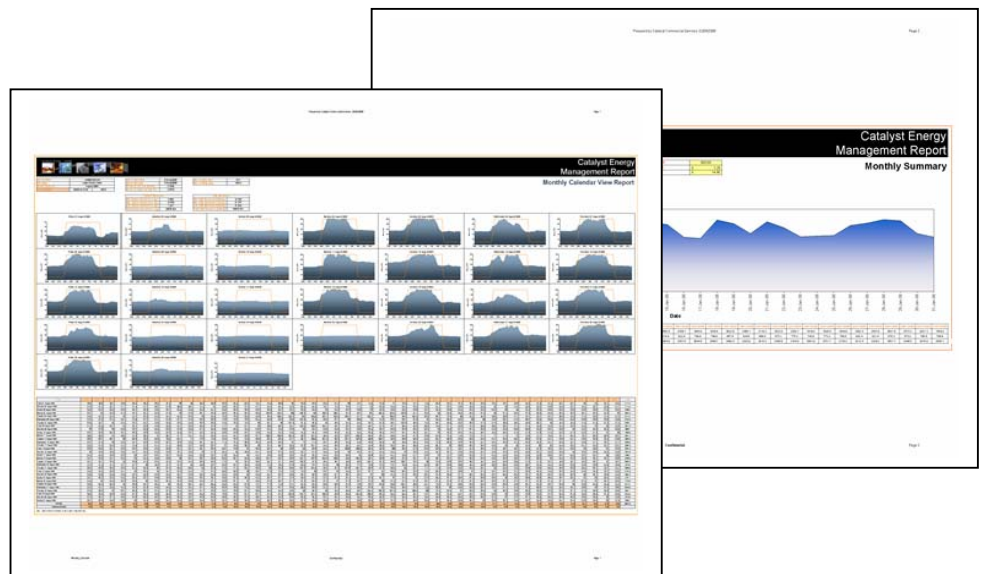

Telephone: 0870 710 7560
 Fax: 0870 710 7561

Energy Management Services

We provide a range of energy metering (Smart Meters) and data collection solutions, all aimed at putting you back in control of your costs. Electricity supplies with a demand of less than 100kW are not obliged to have half hourly metering equipment installed and are known as non-half hourly (NHH) supplies. The charges for these services are often recovered via the chosen electricity supplier's bill. However there is an active and extremely competitive market for meter operation services within the UK for both (NHH) and (HH) and many customers, particularly those with multi-sites can achieve significant cost savings and service enhancements by sourcing a national meter operation agreement.

The Platform

- **Measure:** We can arrange for all types of electricity supply to be half hourly metered, allowing us to collect data at 30 minute intervals throughout the day.
- **Monitor:** With this supply data we can demonstrate through a series of reports how energy is being used throughout the 24-hour cycle. Additional reports can be utilised to measure carbon usage and other factors such as tariff analysis or power factor correction.
- **Target:** Having established your energy profiles and formed an action team, whose responsibility it is to control energy consumption, the next stage is to identify any additional areas for savings. This could be small changes such as good housekeeping or replacing lighting with low energy efficient light bulbs to large changes in heating and ventilation controls.

- **Example Reports:** A monthly calendar review can help identify energy usage and ensure that consumption patterns fit occupancy patterns.
- **Additional Services:** With a pulsed output any additional utilities can be captured in the same format such as gas, water or even production and footfall.
