## Catalyst

### Procurement, Audit, analysis and sourcing

Catalyst is one of the UK's largest independent utilities companies. They offer a complete business consultancy service offering bespoke utilities solutions and strategies for the management of commercial electricity and gas requirements. They evaluate business needs and work with their customers to find solutions that meet their immediate and future requirements. They can advise on day-to-day requirements and consider how their clients can maximise efficiency whilst lowering overheads and ongoing costs.

### Three Services

We have three core services, each designed to increase value in different ways:

- Energy Procurement
- Invoice Validation
- Account Management
- Energy Procurement

Our energy consultant's work with your purchasing staff to advice on contract type and market conditions. Then we'll build purchasing strategies and action plans that will deliver lower total cost and reduced risk of supply chain failure.

- Invoice Validation

We can then provide monthly invoice validation services and liaise directly with your accounts payable department.

- Account Management

Your Account Manager will become your single point of contact for any queries.

## Independent Water Services

As specialist Gas, Electricity, and Water consultants we recognise the importance of offering a complete utility solution to our clients. Our experienced water consultants will carry out a free independent desktop survey of your existing business water charges and business sewerage charges, to identify how we can help you make savings on your business water bills and/or achieve possible refunds. We also give independent advice on billing disputes with water companies and can help you conserve water, help the environment and save your business money on your water bills. You provide us with 6-months water bills and authority for all properties concerned. Your business water bills are analysed and our water consultant prepares a preliminary report, indicating suitable sites for on-site surveys to be made. At this stage there is no cost or obligation whatsoever and any potential savings on your water bill are indicated in a preliminary report.

### Benefits of Contracting

- **Water Bill Overcharges:** We will carry out an audit of your business water charges and effluent charges. That enables us to identify any overcharges on your business water bills and seek to recover them on your behalf. For some clients we have recovered up to 6 years of water overcharges or sewerage overcharges, saving them a large sum of money.
- **Water meters:** Oversized water meters lead to needless recurring charges as standing charges for water service are based on water meter sizes. We can identify the correct water meter for you and arrange for a replacement. Should you pay your water charges based on rateable value or install a water meter? We can do the calculations and give you independent advice.
- **Leak detection & water conservation:** We can quickly identify leaks at your side of the water meter. That can be done via bill analysis or through an on-site survey which can lead to significant immediate savings. We can also advise you on methods to reduce water consumption.
- **Trade effluence analysis:** Is your business effluent charge correct? We can discover if you are paying too much and can also identify ways to reduce the level of contamination, thereby making you significant savings. We can also check the complex bills to ensure that your effluent charges are correct.
- **Notional reliefs:** We will carry out an analysis of your bills and an on-site inspection. They can alert us to any reliefs or allowances which may be available and not being used. We have managed to backdate these reliefs for up to 6 years for some of our clients and savings can be considerable.
- **Checking bills & monitoring consumption:** We can check your incoming water and effluent bills for you to ensure they are correct and monitor your water consumption. That helps ensure that you only pay what is due and we quickly spot abnormal water consumption.
