Aerospace Manufacturer

The Challenge

An aerospace manufacturer was contacted by the local authority, following complaints of plant noise emanating from one of their manufacturing sites. Plant noise from two roof level rooms containing alternators and a ground level compound containing chillers were jointly contributing to causing a noise nuisance to residents at adjacent flats.

The Solution

Investigations were carried out into the noise issues and a report was provided which made recommendations on remedial measures which could be instigated to help mitigate the noise issues.

The Outcome

The assessment and recommendations were undertaken in accordance with BS4142 and the mitigation measure successfully abated the nuisance.
