## Local Authority Schools Assessments

### *The Challenge*

The client, a unitary local authority in Greater London requested energy efficiency and renewable energy assessments for all primary and secondary schools in their borough.

### *The Solution*

The schools each received a full site survey, as well as in depth meetings with the bursar or site manager to explain the purpose of the work and next steps. Due to the number of schools falling within the project a phased approach was taken with secondary schools forming the first phase and primary and special needs schools making up the second phase. Due to the number of sites involved, the consultant's time was managed to ensure the most efficient way of surveying multiple schools in a single day and ensuring no vital information was missed.

### *The Outcome*

Each school received a detailed, tailored report, explaining all of the potential energy efficiency, water efficiency and renewable energy measures identified. An overall table of options was presented, split into zero, low, medium and high cost measures. An executive summary was also produced highlighting the five most significant changes that the schools could make.

Schools are now being supported to apply for low interest loans via the local authority who also requested follow up support in the form of analysing the volume of measures recommended across multiple sites in order to understand the potential benefit of establishing framework contracts to achieve bulk purchasing discounts for the schools.
