Water Auditing Solutions “No win – No Fee”

Catalyst and its team of water experts can carry out a comprehensive examination and analysis of your water consumption and charges.

Our Water Audit will ensure that your water supplier is charging you correctly and appropriately, and wherever possible recover any incorrect charges levied. It may also highlight possible measures to reduce your water consumption in the future.

Our water bill audit service is a free of charge solution available for any type of business. With your water supplier being dictated wholly by your geographical location, companies are often under the misapprehension that they cannot reduce their water costs without reducing their overall consumption. If you are concerned about water consumption and costs, then a historical invoice water audit is the best place to start.

Not only will this identify savings potential immediately but will provide, in many cases, an influx of cash through retrospective rebates to fund further water saving initiatives.

Before work commences it is vital to confirm that the charges currently levied by the water company are valid for the supply in existence at your premises.

The only thing we require from our clients in the first instance is some basic information and a recent copy invoice.

One in three sites will reveal a savings opportunity through analysis alone with savings varying from 10-45% of annual expenditure. Further onsite works can reveal even greater savings and retrospective rebate opportunities (going back six years in line with the Statute of Limitations).

A historical audit will address, but not be limited to, the following:

- All types of billing anomalies
- Investigation of all fixed charges applied
- Verification of allowances available
- Validation of Surface Water Drainage charges
- Assessment of consumption
- Identification of possible leak/shared supply
- Confirmation of appropriate meter sizing
- Investigation of Trade Effluent consents
- Potential for water efficiency measures

Upon completion of the analysis a full report detailing the opportunities available to the customer, both financial and environmental and advice on how to proceed will be provided.
