Commercial Water Site Works

Preventing Water Waste

Do you regularly read your meter? Could you spot a leak or inefficient device?

Knowing where the water you pay for is going may not be as simple as it seems.

Often our auditing and validating services identify high usage that cannot be explained through billing and requires further investigation.

The investigations are unobtrusive and will address;

- ✓ Identification of inefficient equipment
- ✓ Confirmation of correct meter and associated charges
- ✓ Investigation of potential leakage
- ✓ Investigation of storage units, cooling systems and use in process
- ✓ Surface water charge investigation
- ✓ Trade Effluent discharge and charging

You could be wasting thousands of pounds per year through undetected leakage.

Leak Detection Services

Underground leaks on pipe work can lead to costly damage.

As the wasted water soaks in to the ground, it could cause it to subside and if in an essential part of the site, it could cause disruption or loss of business and productivity.

An average leak will waste approximately 20 litres per minute, costing £26,300.00 per year.

And did you know you can also claim back the costs of the lost water.

But it's not just leaking pipe work; do you have toilets, urinals and taps?

These can all have undetected problems and cause high bills and consumption.

The average uncontrolled urinal will waste approximately 5 litres per minute, costing £4,861.80 per year!

Upon completion of the site works a full report detailing the opportunities available to you, both financial and environmental and advice on how to proceed will be provided.
