

Energy Logix™ aM&T

The Energy Logix system is comprised of a scalable metering platform and a web-based energy dashboard with real-time energy & carbon reporting tools. Real-time energy monitoring helps you to identify and correct inefficiencies in your energy use. Reduction solutions based on this information will not only deliver significant energy savings and improve your environmental rating, but also strengthen operational performance. The end result of implementing these solutions: increased profitability.

The EnergyLogix suite of Automatic Monitoring and Targeting (aM&T) software is designed for ease-of-use. End users will appreciate a wide range of features including both metering and monitoring applications as well as informative energy dashboards for active energy management.

“EnergyLogix™ is an automated, closed-loop, energy reduction solution that measures, manages and reports on electrical consumption, in real time, from the meter down to socket and user level.”—SenseLogix™

Features	Benefits
<ul style="list-style-type: none"> • Web-based energy management software • Monitor and targeting software tools • Energy dashboards – configurable and customisable options • Dynamic reporting with ‘drill down’ usability • Energy report creation tools • Alarm tools for active energy and issue management • Report scheduling tools to simplify ongoing administration • Compatible with EnergyLogix EL Series meters and 3rd party meters 	<ul style="list-style-type: none"> • aM&T systems provides an average saving of 8 – 16% • Gain fast and valuable insight of energy usage • Monitor and target energy usage to implement low cost / no cost solutions • Identify energy ‘issues’ in order to implement corrective actions • Monitor system and asset performance e.g. data centres (PUE), BMS and renewables • Utilise energy dashboards to engage staff and stakeholders • Easy to use reporting tools to reduce ongoing administration times • Ideal for retrofit—uses existing cables

Primary system applications:

System Architecture

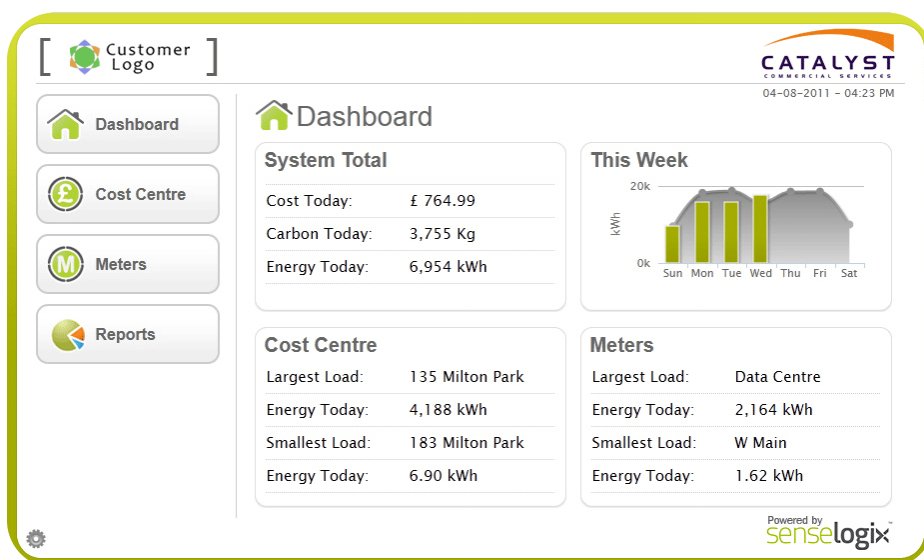

- Eliminates electrical waste
- Reduces energy consumption
- Lowers carbon emissions
- Reduces energy bill
- Increases operational efficiency
- Promotes energy awareness
- Creates individual energy profiles
- Improves user behaviour
- Manages ICT & Appliances
- Produces energy & carbon reports, in real time
- Suitable for retrofit, refurbishment & new build

PC Power Management

- Active PC shutdown
- Behaviour-based energy management policies
- Integrated Wake-on-LAN
- Patch management
- Energy & operational reporting
- Remote appliance management

Real Time Energy and Carbon Reporting

- Enterprise energy consumption
- Energy consumption by site & building
- Carbon foot printing
- Comparison reports
- League tables
- Cost and forecasts
- Departmental & cost centre
- Equipment type
- Individual users
- PC energy & operational information

Energy Logix™ Premium Dashboard
