Real Time Building Level Energy Management

Many companies have already taken advantage of smart meter solutions to measure and control energy use at site level. Or they may have access to half hourly interval data for energy monitoring and targeting (M&T) functions.

Our real time building level energy management solutions address the need for further in-depth control and analysis of energy consumption.

The key capability of our rapid building assessment platform is its ability to crack open a building's interval meter data (from hourly or half-hourly meters) and disaggregate it into specific end uses such as heating, lighting, ventilation and even office desktop equipment.

Our solution address the major issues faced when building an effective energy management strategy and provide real time energy reporting.

In addition to this you have the capability to measure multi utilities from different locations in real time, allowing for effective control and management of your electricity, gas and water requirements.

Powerful, Multi-Utility Energy Analysis

Our innovative real time M&T service is modular based and allows you to simply bolt on additional solutions as your business requirements grow.

Features & Benefits

- Real time energy reporting
- Solutions that grow with your business
- Multi utility management
- Multi site management
- Remote location management
- Web based control and reporting
- Reception Display energy dashboard
- Improve forecasting & setting of energy budgets
- Increase visibility gives greater incentive to reduce & control costs.

Every month we will deliver your comprehensive energy management report directly to your inbox. Or simply take control in real time of your energy consumption.
