Low Energy Lighting and Controls

Our business lighting consultants offer a complete independent service for all aspects of lighting design using the latest technology in low energy lighting. We can provide lighting solutions that support all types of budget, and requirements with a range of funding options.

- ✓ Our consultative approach can match a need for a particular supplier or manufacture.
- ✓ Adopting an engineering approach to lighting taking into account operations and comfort levels.
- ✓ Our low energy lighting solutions and LED lighting products use the highest specification LED's available in the current market.
- ✓ We have the experience and technical expertise to provide innovative and bespoke LED lighting and energy saving solutions for your company.
- ✓ We have the experience and technical expertise to provide innovative solutions to fulfil your requirements and to reduce your energy consumption.
- ✓ Our aim is to provide the very best design and solution to meet each customer's requirements whilst tailoring this to suit each customer's

All products are specifically designed for indoor lighting applications.

All of our products simulate a natural daylight colour but can be manufactured to the customer's specification in order to provide a spectrum of desired colour rendering (Ra).

These types of products have been proven to increase concentration and productivity in work environments.

Funding Options

We are totally impartial, which allows us to capitalise on all available national and or local funding, grants and incentives for renewable technologies and energy efficiency measures including private green investment funding.

We can even provide support for leasing options, allowing you to spread the cost over the savings generated from your chosen technology.

Lighting is well suited to our leasing options as guaranteed savings cover the capital repayments of the hardware, and still provide ongoing savings into an organisation.
